

AUSTRIAN POS SOFTWARE FOR MOBILKOM SUBSIDIARY VIP

Also in Macedonia the Mobilkom Austria relies on point of sale software and retail management systems of NTS New Technology Systems from Upper Austria.

In 1998 the Upper Austrian software company NTS New Technology Systems, POS Software and retail management system - provider, was able to win the Mobilkom Austria as a customer.

Ever since NTS has specialized on the telecommunications industry and on the electronics market, tailoring their software products to the requirements of these industries. The standard software NTSwincash developed by NTS engineers is mainly deployed in the technical retail, with telecommunication providers as well as service providers (public/ municipal utilities) and in public service area (ministries, provincial governments,...) all over Europe.

In its expanding markets Mobilkom continues to rely on this international software company from Upper Austria. Also the Serbian Mobilkom subsidiary employs this system.

After a lead time of six months the first shop has opened in Macedonia on the 19th of September. The shop assistants use software from Austria.
